FILAMENT SPOOL HOLDER ASSEMBLY

Due to packaging, the filament spool holder is not assembled, you will have to assemble the spool holder.

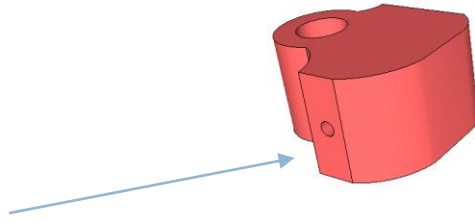

- Washers are on each side of the board.

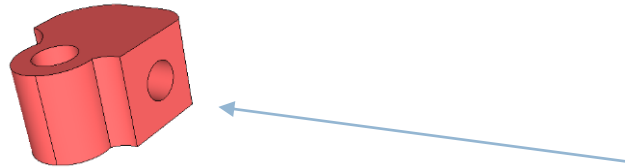

- The domed shape nuts are on the outside.
- The filament guide is in the middle of the top

Make sure the hole on the small side is at least 2.5mm

Make sure the hole on the big side can fit the supplied Teflon tube.

Ensure this by drilling out the small hole with a 2.5mm or 3mm drill bit and then the big hole with a 6mm drill bit.

The roller sits between the hole in the board.
